

**Risk Assessment by Bell and Bullock Circus Theatre for the “Cabin Fever” Static Show**

Identify risk	Who is at risk	Level of risk	Existing Measures Required to Control the Risk
A. Inclement weather - Ground is slippery.	Performers	Low	Care will be taken by performers ( good footwear to be worn ). Decisions to delay / change / cancel performances will be taken, with the organiser, where appropriate.
B. Members of the public wandering into the performance area causing an accident.	Public and Performers	Low	Performance area is cordoned off with cones and/or chain or rope. Public are kept back the required distance from all effects / routines. If this does happen the performance will be paused until the situation is resolved.
C. Juggling equipment / props falling onto the audience.	Public	Low	Performance area is cordoned off with cones and/or chain or rope. Performers are professionally trained in the use of all props.
D. Miniature Smoke Puff effect, (professional theatrical pyrotechnic effect), burns risk.	Public and Performers	Medium	This effect will only be used in appropriate situations and locations and is not essential to the show. Performance area is cordoned off with cones and/or chain or rope. Public are kept back the required distance from all effects / routines. Performers are professionally trained in the use of all props and only professional theatrical pyrotechnic effects are used.
E. Use of members of the public as volunteers during the show leading to injury.	Public and Performers	Low	Performers will help volunteers with their entrance and exit of the stage area. Performers will give clear directions to the volunteers. Volunteers will not be asked to do anything dangerous.
